Edit Code

```
class Solution  {
    public boolean isHappy(int n) {
        int times=99999;
            int val=n;
            int num = 0;

            while(times >1){
                num=val;
                val=0;
                while(num>0){
                    val=val+(int)Math.pow((num%10),2);
                    num=num/10;
                }
                if(val == 1){
                    return true;
                }
              times--;
            }
       return false;

    }
}
```
